PRESIDENT'S MESSAGE

Decembers meeting will be an excellent finishing touch to a great first year for the GBFC. We have the great distinction of being honored with the prescence of the illustrious Mel Krieger. Mel krieger is an individual who has been instrumental in developing the raw talents and energies of beginning fly casters here on the west coast for guite some time. I personally first learned to cast, in my back yard, by watching and rewatching his vido tape from Terry and Stan Hellekson's store. This presentation and fellowship should be entertaining and enjoyable. We also are pulling the winning ticket for the pram on that evening. I doubt that anyone expected our young club to be abe to give such great raffle prizes. We have given many fine prizes away, rods, reels, fly lines and all sorts of parapherbalia that we fishers use. I admit that this year was a lucky one for me, having won a float tube, a rod case, a book and a sharpening stone. The boat is on display at Fly Fishing Specialties and is one nice tri-hull pram. Come on out to the dinner on the 11th of December and let's all have a ball.

Tight Lines and Wild Rivers,

- Mistai m faquefi

FISH OUT

WHERE: Pyramid Lake, meet north of the rearing ponds.

HOW TO GET THERE: Take I-80, 35 miles north of Reno; in Sparks, turn left into 445 to Pyramid Lake. Keep alert, you may see herds of wild horses grazing along the high-way.

WHEN: Saturday, December 6, 1986, at 9:00 AM.

WHAT: LARGE Cutthroat Trout.

WHO: Program headed up by Jim Pratt ind everyone is more than welcome, bring a friend. It's big lake.

FEE: A tribal fishing permit is required, (\$6.00 daily, \$25.00 annual), however a Nevada state license is not required. The permit can be obtained from bait and tackle shops in the area.

TACKLE: An 8 weight rod or even larger (wind works against you). Sinking line and a variety of woolly worms works best.

OTHER EQUIPMENT: Warm clothing, chest waders, a milk crate or 2 step ladder to stard on. Hot thermos of coffee or other stimulating beverage.

For additional information contact Jim Pratt at 966-0136.

the same question: Why do they feel people fly fish and are those who do it normal? Some of the answers were quite long, while others were short. I am not going to go into great detail, but will just give it to you in a few short words.

After intensive study and time spent analyzing answers given to my questions by these very learned people the result is: As a group, you bet we're normal! However, there may be some within this group, who might just be one or more bricks short of a full load. Personally I have never met, or fished with anyone who falls into this category. As far as I know, all of my fishing friends are well within the limits of normal (whatever that means). It's my non-fishing friends I tend to wonder about. But then come to think of it, a close friend and I were fishing a small stream a few weeks ago, and I did notice this habit he had... is it normal for someone to keep opening and closing their mouth like a fish does when it's out of water?

I wonder if my wife agrees with me that I am perfectly sane? Not long ago she told a bunch of her friends that if I'm reincarnated after I die, I will probably come back as a fish. So, if sometime in the very distant future you catch a fish and you are looking into its eyes for that look of "abject surrender," and the fish just happens to wink at you, it will be me. All I ask is that you release me unharmed. MINUTES OF THE GENERAL MEMBERSHIP MEETING - Nov 13, 1986

The meeting was called to order at 7:40 P.M. A little later than usual due to a small problem at the front gate.

Welcome to new members this month; Dale Wahl, Keith Johnson and Rick Edgar all of Roseville, Mike Ziem and Dennis Cooper of Sacramento, Ed and Marie Stull of Newcastle and William (Bill) Hollister of Penryn.

The main topic of the evening was the nomination of club officers for next year. The slate of nominations presented by the Board of Directors is as follows:

President - Morris Schelsinger Vice President - Jim Victorine Secretary - Warren Schoenmann Treasurer - David Davy Directors - Jim Pratt Don Segur

Directors - Jim Pratt, Don Segur, Marge Vingom, and Terry Thomas

One other nomination, received from the floor, was for the office of Treasurer: George Henry. A motion was made and carried to suspend nominations until the December 4th meeting.

A fishout date is set for December 6, at Pyramid Lake. Details are elsewhere in the newsletter.

This evening programs were presented by Ken Winkleblack on his Babine Rive trip this fall and by Bob and Linda Brown on Babine Lake, B.C. fishing.

The Raffle was conducted by Jim Victorine.

The meeting was then adjourned

January					

General Membership Meeting

Thursday, Jan 8, 7:30 PM

We have an exciting schedule. First, the regular December 11th meeting has been moved ahead to December 4th. Guest Speakers will be Ed Hobbs and Joe Patterson. Their presentation will be on fishing in central oregon.

If I am lucky I will continue to avoid the sheriff, who by now probably has a warrant for my arrest for stealing the Federations movie on "Entomology From a Fly Fishermans Point of View." If he doesn't get me first I will show the movie on December 4th.

On December 11th we will have our "First annual Election Dinner" with Mel Kreiger as the featured speaker. Will also raffle off the boat, a week trip for 2 to Babine Lake, have the largest general raffle ever, announce the election results, and eat a great BBQ dinner. You can get your tickets for the dinner and boat at the December 4th meeting. They are also available at Fly Fishing Specialties, 315 Lincoln Street, Roseville. Dinner tickets can also be obtained by sending a check and self addressed return envelope to Ken Winkleblack, 8701 Country Creek, Orangevale, CA 95662. Due to the limited seating you should get your tickets early. Tickets are \$10.00 for adults and \$5.00 for children 12 and under. Remember, this is for all you can eat.

The January meeting will feature Leo Gutterres on Black Bass Fishing. ancient Egyptian housewife saying to her husband, "Amed, take out the trash, it's overflowing." "But my sweet Lotus Blossum," he answers, "it looks like a sand storm is brewing, I think I'll wait until it's over." "Wait shmate!" she yells back at him, "you and all your crazy friends will fish in a storm, but you won't empty the trash if there is so much as a breeze blowing. You are nothing but a lazy bum."

Something non-fly fishing people cannot understand is why we fly fishers have so much equipment. How often have you heard a non-angling aquaintance say something like, "Why do you have all of those poles? You can only use one at a time."

I remember once when we took a friend and his wife, who are both non-fishers, on a picnic to a favored trout stream. After lunch it was time for me to fish. My non-fishing friends' wife was aghast at all of that "fishing junk," as she called it, which I had brought along. She actually seemed slightly concerned for me when, with some difficulty, I hoisted my heavily weighted vest onto my shoulders. As I was walking away, I herd her wispering to my wife, "does he always bring all of this junk along when he goes fishing?" "Certainly" my wife replied, matter of factly "he would feel naked without it." "Boy!" she answered seriously, "all of that stuff just to catch a little fish. You really married a strange one."

I have wondered if myself, and fly fishing brethern are different from the rest of the masses. Are we, perhaps, a bunch of neurotic half-cracked pots? I was determined to try and find out. I decided to go right to the experts. However, I wanted these experts themselves to be fly fishers. I began to contact Psychiatrists, Psychologists, Sociologists, and anyone else I flet could give me a sound professional opinion. I soon found out it was not going to be easy. It was nearlt impossible, at least in our area, to locate people in these analytical professions, who are fly fishers. I began to think they too thought fly fishers were a bit off kilter, and it would be bad for their proffessional image if they indulged in the same pastime. Finally, though, I began making contacts.

Now, fellow fly fisher, you are about to be given the the answers to my tireless endeavors. All were asked

ARE FLY FISHERS NORMAL??

By Jack L. Parker

Just what makes, or why does a person fly fish? What kind of psyche is behind the individual who will spend long hours flailing away, under any and all weather conditions, with a long pole and line, a tiny bunch of feathers tied to the end, trying to catch a fish? Especially, when it is just nearly impossible to get that same person to empty the trash for a nagging spouse, under the most perfect weather conditions.

Fly fishing as we know it today, is a relatively modren sport. However, fly fishing in some form or another is a very ancient way of angling. The Egyptains did it. The Macadonians were doing it in 300 A. D. Was it for the same reasons modren day fly fishers do it? I can just hear an

MIDDLE FORK OF THE EEL RIVER (Mendocine County) Steelhead are trout too, arguably the king of all the trouts, and one particular Steelhead in California is precious above all others...the spring-run "Summer-Steelhead." The habitat requirements of this critter are stringent and man's activities easily harm them. In California we have almost wiped them out by a few populations remain. The Middle Fork of the Eel River supports the largest group.

When populations here begain to drop, CalTrout joined with other agencies to close the Middle Eel down for fishing, then worked together to restore their numbers. When that succeeded, CalTrout proposed that anglers be given the chance to enjoy and appreciate these fish without significantly harming them: a short-season, no-kill fishery. This concept was approved and, under it, fishers get a special March through May season to try hooking one of these spectacular trout before it reaches the closed and guarded sanctuary in the headwaters. The Middle Eel "summer" have been called the finest fighting fish among all of the salmonids. Water conditions dictate wheo to go.

Caution: If you are caught with one of these beauties in possession, the penalty is \$1,000.00 fine and a jail term.

HOW TO RELEASE TROUT WITHOUT HARMING THEM

The quality trout fishing waters are sustained in a large measure by mandatory and voluntary emphasis on the principle of catch-and-release. Please consider that man is the only serious predator of precious sportfish who has a choice..... achoice to forego the kill in order to improve the quality and enjoyment of his sport.

The use of artificial flies with only a single, barbless hook facilitates the quick and harmless release of fish, provided the angler takes the time to handle his fish correctly. It has been demonstrated that the use of barbless hooks and proper care achieves a near-zero mortality in hooked and released trout. By following a few simple rules you can be certain of successful catch-and-release:

1. TIME is of the essence. Play and release fish as rapidly as possible. A fish out of the water cannot live for more than three or four minutes because of brain damage due to lack of oxygen. 2. KEEP THE FISH IN WATER as much as is possible. A fish out of water is suffocating and is many times heavier. It may fatally wound itself if allowed to flop on the beach or rocks. Even a few inches of water under a thrashing fish acts as a cushion.

3. GENTLE HANDLING is essential. Keep your fingers out of the gills. Do not squeeze fish - - small ones can be lifted and held easily by holding them by the lower lip with the thumb and index finger. Nets are helpful provided the mesh does not become entangled in the gills.

4. UNHOOKING. Remove the hook as rapidly as possible, preferably with forceps or long nosed pliers. If deeply hooked cut the leader and leave the hook in. Do not tear hooks out. Be gentle and quick. Small fish, especially may die from shock when a hook is torn out. A freely bleeding fish should be killed and kept for the pany, if regulation allow. If not, release the fish so that its body will be recycled in the ecosystem.

5. REVIVING. Some fish, especially after a long struggle, may loose conciousness. Always hold your unhooked fish in the water, upright, headed upstream. Move the fish forward and backwards so that water runs through the gills. This is artificial respiration and may take a few moments, particularily in lakes. When the fish revives and can swim, release it to survive and challenge another fisher.
