18 O'Neill Forebay Fishout - Sturmer White Leader

December
2 Little Winter Stonefly (Dry)
Yuba River Steelhead
14 Club Meeting - Clubhouse 7:30
21 Board Meeting - Clubhouse 7:00
22 Youth Meeting - Clubhouse 6:30
ANNUAL DINNER REPORT

October 1995
Rich Brown - Dinner Chairman

Tickets for the Annual Dinner will be on sale starting at the October meeting.

Tickets are $30 per person. Tickets purchased before December 1 entitle the holder to participate in the Early Bird raffle. This year's Early Bird prize is a custom make 9 ft / 5 wt rod from American Rod Company.

Our goal is to have each member buy a Dinner ticket and donate a raffle prize.

We have posters advertising the Dinner. If you know of a good spot to hang one, let me know and I will get it to you. (We don't have enough for souvenirs, so please take a poster only if you know of a good location to hang it.

Rich Brown
324-4564 work
797-0309 home

Greetings fellow flyfishers! It seems that not long ago we were waiting for the late winter to end so that we could break out our gear and fish our favorite spring and summer locations. Well can it be that this "short season" is just about over? The shorter days and cooler nights tell me that it is so. By the time you read this edition of the Leader the NCCFFF Conclave will be over, it will be October, and maybe someone will have some good stories about latching on to a nice brown or two in their favorite fall waters.

As we wind down the year it is time for members to think about participating in the business end of the club by running for a board or officer position. All members, new and veteran, are encouraged to run for a position. If you have the desire to help the club mold it's future becoming, a board member or officer is your ticket. If you are interested talk to a board member or officer at the next meeting (October 12) or give a call. If you like, attend a board meeting, all members are welcome. See what takes place and how the club operates from the business side. If you like it and think it's for you run for a position. You are the future of the club, get involved.

Speaking of getting involved, almost a dozen OBF members were present for the latest work party at the Bear River (September 16). A big thank you to Jim Coleman for organizing it and to all of those who attended. Remember that the Bear River restoration project is your project. Come on out the next scheduled work day and see what some of your fellow members have done. You will be amazed at the work that has been completed. If we can get a dozen or so people each time out we will really be able to make some significant progress.
Here are a few notes and updates from the September board meeting. We are working on a 10th anniversary logo pin and will hopefully have it ready soon. Frank Stolten has collected enough video tape from fishouts, meetings, classes, and work parties to begin editing a GBF video. Look for it in the near future. Some of our more computer literate folks are looking into forming a home page for GBF on the Internet. Stay tuned for details we may be going on line!

Well, hope to see you all at the next meeting. Until then call a fishing buddy and hit the water, remember to "let 'em go alive".

Michael Wasserman
President

The Time It All Came Together (cont)

We took up our customary positions on the lake's north shore, 6 weight Mitchells rigged with a flashy variant of the muddler minnow. Out went our casts and up came the bass. They took to our flies like ducks to water. In an hour or so we had landed and released somewhere between 15 and 20 fish, ranging from half a pound up to two pounds. Fish this size don't get a lot of film wasted on them, but, as any experienced bass angler knows, all bass, regardless of size, attack your fly with the same ferocity. The strike is never anticipated and is always a thrill.

So somewhere around 8 P.M. the action tapered off and I ambled down the shoreline some 50 yards to a terribly fishy looking spot. There were a number of buttonbushes growing out in the lake creating a cove. Structure like this was and just the kind that bass go for. My bright winged muddler was on its last leg, a battered remnant of its former splendor, and I toyed with the idea of clipping it off and starting afresh, but, rationalizing in the best of traditions, I decided changing flies would take too much time, and the light was fading fast, so, what the heck, I thought, why not give the old girl one more chance to prove she still has what it takes. The fly went out, landing a foot or so from the farthest shrub. Immediately, the fly disappeared in a swirl. I tightened the line and felt a very heavy fish. It headed straight away for the gape between two of the buttonbushes. I had to stop this run because beyond the cove lay a tangle of snags that would spell trouble with a capital T. I put the old Mitchell into a sickening arc. It had never been put to this kind of test before, but, miraculously, the rod didn't explode and the leader held. The fish was turned and began making headlong plunges first toward one clump of shrubbery, then the next. After some ten minutes I could feel the strength leaving this brute of a bass, and I called to Bill to come over and see what Lake Serena had wrought. Bill insisted on hoisting the fish, murmuring something about 5 or 6 pounds. We will never know exactly what the matriarch of the lake weighed since she was gently resuscitated and released. I do know that laid alongside the lower section of that 6 weight Mitchell, she almost made it from the butt to the stripping guide. That's 27 inches and without a close second represents the largest bass I've ever hooked on a fly.

*From the FFF Newsletter Story File*
THE TIME IT ALL CAME TOGETHER*

Dana Griffin, III
Gainesville, FL
North Florida Fly Fishers

They say if you flail away at the water long enough, and hold your mouth just right, it will all come together. The fish of your fevered imagination will actually rise to your fly, find it acceptable, and give you the fight of your fly fishing life.

For me that special sometime occurred this past Fathers' Day and to what extent the day in question had anything to do with what transpired is probably better left to those deep thinkers who find hidden meaning in what passes for ordinary events. All I know for sure is that my fishing companion Bill and I arranged to meet for the Fathers' Day evening hatch on normally placid Lake Serena and from that point on things got a little crazy. We'd better begin by clearing up one small point. There is no evening hatch on Lake Serena. Bill and I sometimes talk that way, probably because we both spent a number of years in the West chasing trout, and "meeting the hatch" of some particular bug is a phrase that gets lodged very early on in a Western trouter's brain. It's pulled out - the phrase that is - whenever you need to explain to someone why you can't be where you probably should be. "Sorry," you can say, "gotta run now. I'm meeting the pale morning dun hatch on Goose Creek." This works with folks for awhile, but wives and girl friends can get out of sorts pretty fast if you trot this reason out too many times. Don't get me wrong. I'll believe you, since I know for a fact that Goose Creek supports a fine population of PMDs, but to some ears the phrase sounds like an excuse.

What really brings Bill and I to Lake Serena's shores along about twilight is a fantastic dance of dragonflies. To be absolutely technical about it, these bugs aren't hatching, but their effect on the bass comes to the same end. The sun goes down, the dragonflies abandon the lakeside shrubbery and start their unpredictable zig-zag darting across the mirrored surface of the lake. What happens then is entirely predictable and crazy. The bass start leaping into the air, making an Olympic class effort to snatch one of these start and go aerialist.

FISHMASTER'S REPORT
October, 1995
Bill Carnazzo, Fishmaster

Upcoming Outings: On October 21st we will hold the Upper Sacramento River Outing. The river will be in great shape, and should be fishing well then. Hopefully the weather will be cool and not be too rainy. There will be a sign-up at the October general meeting; if you can't make that meeting, or if you have questions, call me. Also, don't forget the November fishout at O'Neil Forebay, for Striped Bass. Sturmar White will lead that outing.

Past Outings: On the September 23rd weekend, the Robinson Creek fishout was held. John Hogg graciously volunteered to lead that fishout, but as of this writing I don't have a report. John will likely give a report at the October meeting, or perhaps will have an article for this issue of the Leader.

Contact the Fishmaster. If you have questions on any of the outings, or want information, please call me. (264-5346 work or 663-2604 home)
FLYTYER'S CORNER

by

BILL CARNAZZO

Electric Caddis
October, 1995

Note: The Pattern for the October Fly Tying contest will be the Rabbit Leech featured in the September Leader. Bring your best version to the October General Meeting. Remember--The winner gets a free GBF flybox, and each person entering a fly gets a ticket to be deposited for the drawing at next year's picnic. Bring those flies in--Don't be shy!!

Another Note: [See next article for a rundown on the rules and incentives for the contest]

The Electric Caddis is a pattern I learned of while fishing with Fred Gordon on the Upper Sacramento. Fished on the point of the tippet, with another fly (such as a Prince Nymph) on the dropper, it makes a deadly choice. You will generally need to add weight to your tippet to get the fly (or flies) down to where those big ones are lurking. Other versions of this fly are sometimes generically called “Green Rockworm” patterns.

Materials:

<table>

CAMPAIGN TIME

It's that time of year again. This year just seems to be flying by and we need to begin thinking of electing new club officers. There are three open Director positions and all of the Board member positions that will expire the end of 1995. Generally, this also will open some of the committee positions as people move to new and different jobs. So, look over page 2 closely. If you have an interest in any of these positions, or have someone in mind that you would like to see in some particular spot please let us know. The nominating committee is being put together and they will want your inputs.

Among the committee positions that will need to be filled this year is the position of editor for the Leader. Being editor is an especially rewarding position for someone with a computer and a telephone.

Now is the time to think about what you can do for your club too. If you have some interest but are not quite sure what the job entails, call the person presently holding that spot and talk to them. Get an idea of exactly what is required and then let us know of your interest. We need some new people to step up and pitch in. Remember, the more you contribute the more you will be rewarded.
FRESHWATER STRIPERS
AT
O'NEIL FOREBAY
November 18th Fishout

O'Neil Forebay has vast areas of gently sloping, weed-covered flats, and they can be a fly fishers dream at times. The water ranges from 3 to 15 feet deep with plenty of subsurface vegetation to sustain the bait fish stripers feed on most. Striped bass are schooling species and few fish hit a streamer harder. If no fish are taken in one area, we will move until we find the fish. Occasionally we find only 12 inch fish. That's O'Neil Forebay flats. A 30 ponder may eat your fly on the next cast.

Many stripers are taken by wading anglers, but when wade fishing it takes experimentation to determine which sink rate line is best for existing conditions. Most of us will be using float tubes. It's easy, It's fun. Getting the fly down quickly to the level of the bass and keeping it there during the entire length of the retrieve is extremely important for success. High-density lines accomplish this very effectively.

This is important because stripers are known to stalk a lure or fly for great distances, this may seem early to alert you to a fishout in November, but I feel we have quite a few members that do not know enough about this fun fishery and what is needed to fish it effectively. Along with the regular October Bass flies that Bill Carnazzo will be tying, I am asking Terry Eggleston to tye his Borger rabbit pattern and I will tye Whistlers prior to the meeting. We can talk lines, leaders, flies and strategies with interested people at that time. Until then, Think Stripers -

---Big Stripers---

Sturmer White

Nov. Fishmaster

Electric Caddis (Con't)

Tying Instructions:

1. Using olive tying thread, cover hook with thread. The thread should extend about 1/2 way down the bend, past the end of the barb.

2. At the point, tie in rib material, then at the same point tie in a 1/8" strip of the mylar sheeting, leaving it pointing out to the rear. (Note: this can be obtained from craft stores; it is used as a ribbon for fancy packages)

3. At the same point, tie in the green fluorescent material. Bring tying thread to front of hook. Then wind the body material forward to about 1/8” behind eye. Tie off there .

4. Bring the mylar over the back of the fly and tie down at forward end of body.

5. Rib the fly with the gold wire, thus fastening down the mylar shellback. Tie off ribbing.

6. Dub a small thorax with the rabbit and whip finish the olive thread.

7. Bend on the black thread and form a nice small black head. Whip finish again.

- See ya on the creek!!!

LAST MONTHS WINNER

Congratulations to Jeanne English for being selected the winner of the flytying contest in September. Jeanne tied a beautiful Zug Bug and you can check it out in the display case behind the library table at the next meeting.
FLY TYING CONTEST RULES

Don't be reluctant to submit your entry ... ask for a critique if you want help, or to know what the winning fly has that yours doesn't. Here's the rules:

Rules:
• Judging will be during the meeting
• Winner announced just before program
• Winner still gets a fly box
• Judge(s) will stay after meeting to give critique, if requested.
• Each member entering a fly gets a free ticket, on which name and phone number is placed.
• Tickets are deposited in a sealed box each meeting
• Drawing held at annual picnic
• Winner gets $100 gift certificate at fly shop of choice.

As you know, certain of the tyers in the club have voluntarily kept themselves out of the contest, that will continue to be the case. So, enter your flies, folks .... don't be shy!!!

Note: The fly must be tied in accordance with the instructions from the Leader (right or wrong, and irrespective of whether you find another version of the pattern in a book somewhere), in order to keep the playing field level. The judges need to make a choice based on a single pattern. THANKS.
Eleven ambitious Granite Bay Flycasters turned out Saturday the 16th of September to spend the day in the beautiful Bear River valley. Actually most of the time was in the beautiful Bear River. Previous work parties had cut and placed what we thought would be more than enough posts, logs and branches to keep this crew busy all weekend. By about 4:00 all that material was in place and even more was prepared at the staging area. This was a very productive day and now you can really begin to see what the future holds for this area. It won't be long before this will be one of your favorite fishing holes. Thanks go to:

Jim D. Bennett  
Frank Stolten  
Paul Roccoforte  
Vern Stubbs  
Marti Wallace  
Wayne Dahl  
Bob Naegle  
Tom Klinefelter  
Jim Coleman  
Vern Stolten  
Marti Wallace  
Mike Wasserman

We invite you all to come up and pitch in on the next work party but I must warn you, This can be addictive. Once you see the possibilities and experience the feeling of accomplishment of a days work well done you may become hooked. So, don't even think of coming up unless you have a will of iron. Bet you can't come just one time.

Speaking of the next work party; We plan a weekend work / fishing / camping party the 14th and 15th of this month. This will be the last major opportunity of the season more than likely so we really want to make this a good one. I'll provide more details at the General Meeting or give me a call. I'm also going to need some preparatory help before this to get supplies in place and etc. If you can come up either Wednesday the 4th or the 11 or Saturday the 7th your help will be appreciated.

Come on out - get involved - its a rewarding experience!!!

On September, 8, 9 and 10 the Juniors went to the Trinity River. It was our first overnight outing. Those who attended were: The Bevards, the English's, Morgan and Michael Thaiken and Bill and Judy Carnazzo. We got up there Friday around lunch and we fished until about six. Then we ate and waited for everyone else. Saturday morning everyone headed up to Coffee Creek to catch some Kokanee, but before we made it up there we stopped for some donuts. When we got to the creek, no Kokanee were spotted. We fished there for a while then we headed back to the campground for lunch then to the Trinity. Greg Bevard Senior hooked a salmon and so did I. My salmon was hooked in the air on a two weight. My brother, Isaac, also hooked a salmon but it was snagged. No one landed any salmon but we all caught some trout.

Next Junior meeting is October 20 at 6:30 PM. We have a conservation project coming up on the American River. We hope to combine it with a picnic and maybe some fishing!
Float Tube Warning*
by Ilsa Nolan
Northwest Women Fly Fishers

It is always especially sad to hear of a fly fisher who died while fishing. With thanks to the Washington Fly Fishing Club newsletter, I'd like to share the tragedy of the death of fly fishing guide Keith Miller and hope that we all are more careful ourselves.

"Keith, age 42, and a former lifesaver, drowned in just under seven feet of water and was found a very short time after the accident occurred. He had been using paddle pushers and had managed to remove one of them completely before he ran out of time. As you know, paddle pushers do not have a quick release system and one cannot swim in them. Furthermore, it was discovered that the small inner tube that should normally have been in the back rest of the float tube was missing completely. Pool tests have proved that this (additional tube) is sufficient to keep any angler afloat. Finally, and most importantly, the 8.50 x 20 main bladder (inner tube) had split over a length of 18 inches causing instant and total deflation.

"Some float-tube manufacturing companies have stopped using the 8.50 tube and started using the 10.0 and 11.0 truck tubes. It appears that as the 8.50 bladder had to expand a great deal to fill out the outer canvas shell, not only did it end up being stretched thin, but worse yet the pressure of the seams against the bladder was enough to cut into the rubber itself, leaving the shape of each pocket, each main seam and zipper neatly etched into the bladder. These cuts went to nearly half the thickness of the rubber in places.

"Please check your equipment and make sure you do not have a potentially dangerous situation waiting to make the misadventure headlines. We have no members or friends of members to spare. Also, with the advent of another fishing season soon to be upon us, a general inspection of floating and boating equipment that has been stored for the winter is a good recipe for longevity and safe fishing. Good luck and tight lines for the new season."

*From the FFF Newsletter Story File

---

Tackle
Kiene's Fly Shop features one of the largest inventories of fly tackle and tying materials in California. Every major brand is represented.

Travel
Travel with us on a hosted trip to Alaska, Argentina, Baja, British Columbia, Christmas Island, New Zealand, Yucatan and more.

Education
We offer many educational opportunities including classes in fly tying, fly casting, rod building and entomology, the one day Kiene's Fly Fishing Schools, the three day Kiene's Fly Fishing Seminar, and the annual Kiene's Fly Fishing Expo.

Hours
Monday-Friday 10 ~ 6
Saturday 9 ~ 5
Sunday 12 ~ 5

Call us for the latest fishing updates or for information regarding tackle, travel, or our schools.

2654 Marconi Ave. Sacramento, CA 95821 916/486-9958 800/4000-FLY
Thanks to everyone that attended the Rucker Lake Fishout! This had to be a first for GBF - we had a good time and everyone fishing caught lots of fish! I was skeptical with only one die-hard and (new member Jan Talbot) on the sign-up sheet still intended on joining us by the night prior to the fishout. But Paul and I were determined to have a great weekend catching small-mouth bass. By the time that I arrived at the lake late Friday night the rustic and beautiful site on the far east end of the lake (which Paul designated as Camp Bucktail, and luckily had put signs up all along the winding and rutted trail to lead in the stragglers) was filled with GBF campers! Early Saturday we were joined by several more bass fishers and the entire atmosphere was social. Relatively new faces to GBF joined us - Patrick and Julie with canoe, Jan of course was there early, Bruce Bartholomew was a bit concerned about the size of the fish but seemed to have fun anyway. Al and Pat came in Saturday with Jim Bennett and kayak. Also joining us Saturday was Frank Stolten who was gracious enough to leave behind his entire fishing wardrobe including float tube for a new member to try out. One of our new Golden Trout chairpersons, Steve Bertrand arrived Saturday and helped keep the late night food feast and social hour going well past when I hit the sack. Well - we kept fishing through most of Sunday until everybody tired of reeling in fish and we had a brief visit from former GBF members Glenn and Tanya who seem to be doing more mountain biking than fishing lately. (we're working on them). All in all I enjoyed this fishout more than any I had previously gone on. The main reason was that this was a perfect chance to meet more folks that we can continue to fish with. My feeling has always been that the fishouts are a great starting point to motivate us all to keep sharing tips on flies, equipment and techniques and hopefully we'll all become more involved in helping each other to fully appreciate the lifestyle of fly fishing. Not quite a religion - but very close!

Our speaker for the October meeting will be Mark Pinto of "Home Waters Guide Service". As his guide service name implies, Mark specializes in spots close to home including Putah Creek, Stanislaus and Mokulumne Rivers, and Delta Stripers.

As a Orvis endorsed Guide and Instructor Mark spends most of the year exploring local flyfishing hot spots and perfecting techniques with his clients and students.

If your looking for some new local spots close to home or just want to pick up a few new ideas on how to fish these places.. don't miss this show!!

See you there!!
TECH CLINIC - How to evaluate a Fly Rod
by: JOHN HOGG

This clinic is scheduled for Saturday, October 14, 1995. It will run from 10 am to 2 PM at the clubhouse. (The clinic was originally scheduled for Sept. 16 but was not conducted.

Have you ever had someone hand you a rod in a store and say "This is a really great rod, give it a try"! So you shake it up and down a few times, and reply, "Yeah, is get a great action!" ( ... meanwhile you're wondering just what the heck is a great action.) And what about the spline of your rod, did you test it when you bought the rod to make sure the guides were located properly relative to the spline? And what about the number of guides on the rod? How many is good? and what about their spacing? Hookholders, good or bad? Up locking or down locking reel seats? Stripping guides, one, two or three?

And flylines, why do I buy a six weight rod and then some "expert" tells me I should put on a seven weight line? And casting, one guru tells me double taper lines are better, another swears by weight forward lines.

And do you really have to pay $300 or more to get a decent quality flyrod? And what about the discount stores? Can I get a good quality rod there?

We'll cover these issues and many more including how to evaluate and test a rod so you can tell the good from the bad, from the ugly, and how to chose intelligently from the scores of flylines available, and the real scoop

FLY FISHING'S LEGACY*

In these days of depleted streams it is most necessary that the doctrine of fly fishing be broadcast that the one pleasure of trout fishing, apart from the joy of being close to nature, is matching one's wits against the cunning of the trout. He alone deserves the title of sportsman who returns careful to the water all the trout he does no need for food; as soon as the fish is take into the net, all the sport to be had with that particular fish is over, and when killed and put into the creel it has become simply meat.

*From the FFF Newsletter Story File
Robinson Creek Outing
- A Success!
by: John Hogg - Outing Fishmaster

Mono Village where we camped this year frankly reminded me of "Little LA" with dozens and dozens of trailers, fifth wheelers and motor homes complete with satellite dishes, boats, motors and etc. But leave it to masterful Vern Stubbs who found an extremely secluded campsite away from the hustle and bustle, and GBF members were able to enjoy a wilderness like experience. (Only a couple of negative comments were heard about restrooms being a half mile hike.)

Robinson Creek itself was filled with spawning Kokanee salmon. 10 to 12 inches long, these fully mature salmon wore their bright red colors, and as they pursued their final mission, wily trout hung back, virtually invisible, and fed on the newly laid eggs.

To say the fishing was good would be an understatement. Isaac English took the largest fish - a 20 inch rainbow that was so huge in girth it easily went five pounds, the rest of us suffered with smaller fish but plenty of them. A side trip down to the Walker revealed a high running stream that was spread to more than twice its normal width - sometimes a 100 feet in width! Wadeable, but running fast, the river was only slightly off-color, and the hour I was there fished very well with browns rising to attractor flies. (Ron English got a little bored in the river, and decided to 'swim' for a while)

A large campfire on Saturday night brought all of us together, Wayne and Stephanie Dahl, Ron, Jeanne, Isaac and Nick English, Doyle Richardson, John, Deanna and Robert Hogg, and of course master joke teller, Vern Stubbs.

Library Report
by: Kim Roccicorte - GBF Librarian

Thanks to the Board of Directors, on behalf of all GBF club members, the Library has just received a stack of new additions to the library! Thank you to the club members that keep the books and videos circulating!

Just a reminder now that summer vacations have ended please search your homes for those library materials you may have checked out prior to departure. Many books and tapes went out on vacation recently - please bring them back so that others may enjoy them! There is a $5 per month/per item late fee for materials kept out for over a month. You have the option to waive the late fee if you donate an item to the monthly raffle (such as flies or fishing related items).

The new books which will be available at the October meeting:

- Tying Nymphs - Randall Kaufman, (this is the new edition which includes beautiful color plates!)
- Nymph Fishing - Dave Hughes
- Fly Fishing California's North Yuba River - Ed Klingelhofer
- Fly Fishing the Tailwaters - Ed Engle
- Fly Fishing with Children - A Guide for Parents - Philip Burnguell, M.D.
- Emergers - Doug Swisher and Carl Richards
- Fishing the Dry Fly - Dermot Wilson

If you don't see your request mentioned we plan to make a few more purchases before the year ends. Let's get those flies turned into more books!

Thank you to American Fly Fishing Co. for helping GBF stretch our spending money to acquire more books!
on leaders. And finally, how to tie 'em all together to best meet your particular fishing circumstances.

Please bring a rod (4 to 7 weight) that you are willing to have others handle and evaluate. The rod should be rigged with flyline, a 1x or 2x leader no longer than 7 feet, and bushy fly, size 10.

Clinic cost is $10, payable to GBF. Bring your own lunch. For further information call John Hogg at 823-9744.

Fishing Report

You have noticed by now that we have the latest Fishing Report reprinted here for everyone again. Make sure you let the good people at FISH FIRST know how much we appreciate this. They are kind enough to fax this to us about two times a month on their nickel. If you get a chance stop in and say hello and Thanks. They are at 1404 Solono Ave. in Albany, (N. Berkeley) or just give them a call at 510-526-1937. Maybe you have some information that would fit in the next report.

The Leader

Remember the Leader is your publication and as such needs your input. Every member is encouraged to contribute. Weather you have an idea, criticism, a story, an article or you are a good artist that can draw a picture for us, please don't hold back. Contact your editor and lets hear what you have to say. Inputs are required by the 22nd of October to make the November publication. These can be hand written, typed, faxed or dictated over the phone or just call and pass on your thoughts. The point is that we need input from you!

Call or fax Wayne at 726-1584.
Whatis the Hot and What's Not (continued) — The Fishing Report from Fish First!

<tr>
<td>Rogue River (Medford to Shady Cove)</td>
<td>Mediative flow (100 cfs.), clear.</td>
<td>Fishing is awesome for 18-25&quot; but steelhead indicated anything with large monofilament nymphs and october caddis pupa is producing lots of fish throughout the day. lures and streamers also producing. Salmon are hot on the redds yet, glo-bug action will pick up in coming weeks.</td>
<td>Stoneflies (see Yuba River), Streamers (see East Carson River), October caddis (see McCloud River).</td>
</tr>
<tr>
<td>Sacramento River (above Lake Shasta)</td>
<td>Low flows (65 cfs at Fox Canyon, 200 cfs at Dog Creek), Clear, mid 50's to mid 60's.</td>
<td>Fishing is pretty, basally improving. Indicator nymphing the deep heavy runs is productive. Steelhead A+ runs, with a few larger fish starting to show. Smallter (#14-18) nymphs producing better than large ones. Creamy mayflies hatching in the evening around Dunsmuir. some fish working the dies. Look for the october caddis hatch in the next couple of weeks.</td>
<td>Caddis pupa - SRI mon eye caddis, Liger's instictor, Fahani teresia, wet and dry black; brown stone, rubberleg, pink granite, SRI real. CDC #22., emerger/diving.</td>
</tr>
<tr>
<td>Stantilus River (Middle Fork below Beaulieu Reservoir)</td>
<td>Clear, cool. Normal water level (170 cfs at Mt. Knight).</td>
<td>Fishing is fair to good for rainbows and browns (10-16). Indicator nymphing from Sping Gap to Healdsville. Afternoons are consistent throughout the day, with best action on beadhead princes and small mayfly nymphs. Midges and creamy mayflies showing the evening, with some fish working the dies in the pools and slower runs.</td>
<td>Midge pupalna - disco, Kaufman's madge pupa, grey midge pupa, brasse, midge #18-22. Midge emerging - #16's emerge. Harrop midge adult, green black,.DoesNotExist, CDC hatching, CDC midge adult. Horat CDC transitional midge. parasitic Adams #20-22. Heads (see Pit River).</td>
</tr>
<tr>
<td>Truckee River (from Lake Tahoe to Nevada State line)</td>
<td>Clear, cool. 70 cfs release from Tahoma, 500 cfs @ Floriston.</td>
<td>Fishing is steady, and improving with cooler weather. Indicator nymphing is consistent throughout the day with caddis pupa (2-4) and small mayfly nymphs. Some mayflies and midges hatching in the afternoon and evening. October caddis have not started yet.</td>
<td>Headheads (see Pit River), Caddis (see Upper Sac River), PMD (see Fall River), Midges (see Stanistius River).</td>
</tr>
<tr>
<td>Yuba River (below Englebright dam)</td>
<td>Clear, low flow (710 cfs.), Mid 50's.</td>
<td>Fishing is very good. Ruis and rainbow trout showing. Indicator nymphing with caddis pupa and stonefly nymphs. A few fish rising to caddis dries and fish flies. The salmon are in, but not on the redds yet.</td>
<td>Stonefly nymph - Headhead biot stone, superior stone, Berr's dark stone, braided black caddis. black rubberleg, cerise sparkle stone, brownstone rubberleg (#12). Stonefly dry - SRI invisilestone. Kaufman's stimulator, improved stone, golden stone rubbers, madam X (#16-12). Heads (see Pit River), Caddis (see Upper Sac River).</td>
</tr>

Fall Schedule of Classes at Fish First! Fish With Us Clinic — You will learn accurate points, resident aquatic insects, and productive fishing techniques. Depending on the flow and water temperature, you will be able to fish the same water with knowledge and confidence by yourself. St. Combs experience this exciting fishery that is located only one hour from our shop. Full and spring fish these powerful gamefish stocked up in Delta. With an average depth of 6-8 ft, nun builds a fish to 6-lb. Truck's Trek is ideal for fishing. Learn the most productive fishing techniques of the day. The first day will be on the Upper Sac during the October caddis hatch, the last big hatch of the year. The second day will be on the lower Sac in Redding. The salmon will be spawning with the huge brood stock spawning behind them, feeding on salmon roe. We catch some of our largest browns of the year (6-12) on fall widow caddis. Nymphs: #14-18, SRI #14-18, SRI #16-18. Other years: #14-18, SRI #16-18, SRI #18-22. Heads (see Pit River). Caddis (see Upper Sac River). PMD (see Fall River), Midges (see Stanislaus River). |

Nevislake Report — Klamath River — Fishing is fair to good for brown and rainbow and some steelhead. Most fish are in the lower river (Johnson's area). Hicade bugs, mayflies, and soft hackle flies are doing well throughout the system. Things are looking good for the Nevislake Area. The salmon are hot on the redds yet. Look for improving fishing to come soon. American River — High flows, lots of salmon, but not many steelies yet. Rogue, Yuba Rivers — see main report.

Goldstream Report — Noyo River — Fishing is fair to good for brown and rainbow and some steelhead. Most fish are in the lower river (Johnson's area). Hicade bugs, mayflies, and soft hackle flies are doing well throughout the system. Things are looking good for the Nevislake Area. The salmon are hot on the redds yet. Look for improving fishing to come soon. American River — High flows, lots of salmon, but not many steelies yet. Rogue, Yuba Rivers — see main report.

Oroville Report — Water on Lower Sac River through Redding is down to 9500 cfs, with the salmon ready to spawn. Fishing will be awesome in coming weeks. Back country in the back country is producing lots of fish. Farther upstream, the caddis hatch is producing lots of fish. The salmon are in, but not on the redds yet. Look for improving fishing to come soon. American River — High flows, lots of salmon, but not many steelies yet. Rogue, Yuba Rivers — see main report.

This report would not be possible without the help of Keis Powell Fly Shop/Chico, Ralph & Lisa Cutter Truckee, Dave Brown/Front Country Fly Shop/Burney, Mt Shasta, Allen Bross, Steve Kennedy/Troutfitters/Mammoth Lakes, Randy Johnson/Truckee, Ken's Sporting Goods/Bridgeport, Dan Hart/Hart's Guide Service/Mt Shasta. Help keep this report updated - call in.

<tr>
<td>Carson River, East Fork</td>
<td>Moderate flow (170 cfs @ Gardnerville), clear to mid/high 50°F's.</td>
<td>Fishing is fair, and improving. Indicator nymphing with beadheads and October caddis pupa producing for browns and rainbows to 16&quot;. Dry fly fishing with attractors and Hoppers also bringing in some fish. Cody mayflies and some caddis hatching in the evening. Streamer fishing at dawn and dusk producing some big fish in the larger pools.</td>
<td>Streamers - Dry brake zonker, Jensen marabou leech, woolly worm, sculpin, krysalis, articulated leech, make, midge leech, midge pupa, black spinners, light black leech, and some caddis. October caddis pupa. Hoppers (see Pit River), Skinner (see Fall River), Caddis (see Upper Sac River), and some caddis dries. Ties include Tenkara Fly, BWOs (see Fall River), Polyester (see Pit River).</td>
</tr>
<tr>
<td>Crowley Lake</td>
<td>Weedy, mid 50°F's to mid 60°F's.</td>
<td>Fishing is good. Streamers on sinking lines producing 15-33&quot; rainbows and browns. Good areas to fish are Wilson, Hot Creek, and Magee Bend. Crooked Creek arm has an algae bloom. The trick is to fish different depths until you find the larger trout.</td>
<td>Streamers (see East Carson River), October caddis (see McCloud River), and some caddis dries. Ties include Tenkara Fly, BWOs (see Fall River), Polyester (see Pit River).</td>
</tr>
<tr>
<td>Fall River (Cal Trout)</td>
<td>Clear, normal flows, cool. Weedy,</td>
<td>Fishing is fair. BWO hatch is improving; on cloudy days trout are rising from 10 ft up. Indicator nymphing and swinging small mayfly nymphs are steady producers. Swinging streamers at the deep bends is productive in afternoon when wind comes up. PMD hatch is sporadic.</td>
<td>PMD nymph - PT, HB PT, poxyback (PM). Burd's HB intermediate, Burd's key nymph (16-23). PMD emerger - Hopper short wingemerger, Hopper CDC transitional dun, DB foam emerger, floating nymph. Lawson's halfback emerger, Lawson's caddis dun, Harrop cape dun, CDC Comparadun, Shimazaki CDC dun, sparkle dun, thorax dun, extended body dun, hlb pasture, Hopper hairwing dun (#14-18). BWO patterns (see Tenkara Fly). Streamers (see East Carson River).</td>
</tr>
<tr>
<td>Feather River, Middle Fork</td>
<td>Clear, normal flow (280 cfs @ Milpaw Bar). Mid 50°F's to low 60°F's.</td>
<td>Fishing is good. Best area is from Nelson Creek to Lake Cowville. Indicator nymphing with beadheads in the runs is the ticket. Greenhopper fishing in the afternoon is good, especially on windy days. Caddis and cod mayfly nymphs are looking up from 5 ft to 20 ft deep. Most browns and browns are running 2-12&quot;.</td>
<td>Hopper - Dave's, bullethead, paradise, foam wing (#6-12). Attractor dry - royal wulff, yellow hopper, royal hopper, stimulator, H&amp;L variant, Adams irresistible, trout (#10-16). Stoneflies (see McCloud River), Cody mayfly nymph (#16 - 20). PMD (see Fall River), Caddis (see Upper Sac River), and some caddis dries. Ties include Tenkara Fly, BWOs (see Fall River), Polyester (see Pit River).</td>
</tr>
<tr>
<td>Hut Creek - Lower (PM-2 to Pit River)</td>
<td>Normal flows, clear. Weedy.</td>
<td>Fishing is improving. Morning rise hatch is ending. A few small browns are rising in the morning. Middle fishing is slow; keep walking the flats looking for risers (use Hoppers). BWO hatch in mid-afternoon has started and will get better in coming weeks (especially on cloudy days). Indicator nymphing in the PM-2 riffle is also improving.</td>
<td>BWO nymph - poxyback, blue poxyback, Burd's leg nymph, DB hex nymph, hares ear, PT, brassie, olive disco midge, beth's wet emerger (16-20). PMD emergers - floating nymph. RS2, foam floating nymph, Hopper short wingemerger, DB hexemerger, Lawson's halfback emerger, marabou cripple, CDC transitional dun, Stmcup biot dun, hlb pasture, CDC paradise, Hopper hairwing, sparkle dun, Shimazaki CDC dun (#16-20). PMD (see Fall River). Caddis (see Upper Sac River), and some caddis dries. Ties include Tenkara Fly, BWOs (see Fall River), Polyester (see Pit River).</td>
</tr>
<tr>
<td>Heenan Lake</td>
<td>Some algae, low 60°F's.</td>
<td>Fishing is slow. Streamers and beadheads on sinking lines are producing a few cutthroats to 20&quot;. Recent cold nights should improve fishing in the next week or two.</td>
<td>Beadheads (see Pit River). Streamers (see East Carson River).</td>
</tr>
<tr>
<td>McCloud River</td>
<td>215 cfs at Abbi-Di-Nah, normal color, Mid to high 30°F's.</td>
<td>Fishing is fair to good. Nymph the 2 fly rig (beadhead october caddis with a small mayfly or caddis dropper) in the pocket water. Fish are willing to come up for attractor dries in the evening (some crommy mayflies and a few caddis hatching). The October caddis hatch will get cranking shortly. The migratory browns have not shown up in good numbers yet.</td>
<td>October caddis pupa: Mercers pupa, (mini terror pupa), beadhead rod squire (8-10). Dry - Orange stimulator, H&amp;L variant stimulator (8-12). Stoneflies (see Yuba River). Caddis (see Upper Sac River), PMD (see PMD for Fall River).</td>
</tr>
<tr>
<td>Pit River</td>
<td>Normal clarity, 55-60°F. 130 cfs at Big Bend.</td>
<td>Fishing is very good. Indicator nymphing with 2 fly rig (isonycia with a small caddis pupa or mayfly nymph dropper) is producing throughout the day. For consistent action, make sure your fly is near the bottom. Just a couple of October caddis hatching; look for more bugs in the next couple of weeks.</td>
<td>Beadheads - larva luce soft hackle, lite brite olive and peacock, olie dig, CDC ducks, gray olie, sedge bug, sulfur PT, black PT, hares ear, olive hare's ear, march brown, peacock caddis, caddis pupa (#10-18). Isonycia - black AP, trichotomy, beadhead isonyca (#10). Stoneflies (see Yuba River). Caddis (see Upper Sac River), October caddis (see McCloud River).</td>
</tr>
