

Still Water Leader Rigs from GBF Experts

Gene Goss

13' to 17' total length

Notes: Gene uses only 1 fly. His fluorocarbon is Berkley Vanish on the 110yd spools.

Jim Holmes

13' to 17' total length

Notes: Same as Gene except on the optional 2nd fly.

Scott Vaughn

10' total length

Notes: Scott uses all fluorocarbon. Likes loop-to-loop connection for faster tippet replacement.

- Options: 1) Nail knot attachment to main fly line vs. looped butt section; A very long leader is hard to attach via loop to loop.
2) Replace knots with tippet ring or small swivel (Spro #10, black). Swivels can reduce twisting and tangles with streamers.
